PROFESSIONAL SUMMARY

IT Administrator with 6+ years managing identity, endpoint, and infrastructure systems (Okta, Jamf, Intune, Active Directory, Azure) across high-growth SaaS and fintech environments. Skilled at building automation and internal tooling to reduce manual workload. Proven track record designing tools from the ground up — asset management, ticketing, and knowledge-base automation — that improve team efficiency. Currently expanding into full-stack development, applying the same automation instinct to building and shipping web applications.

TECHNICAL SKILLS

Languages & Development: Python, JavaScript, Bash, PowerShell, HTML/CSS, Java, C, Git/GitHub

Frameworks & Tools: Flask, SQLAlchemy, Streamlit, pandas, pytest, GitHub Actions (CI/CD), REST APIs

Identity & Access: Okta, Azure AD, Active Directory, OneLogin, JumpCloud, SSO, MFA/2FA, IdP

MDM & Endpoint: Jamf, Intune & Autopilot, SCCM, Mobile Device Management, Cortex XDR, Endpoint Encryption

Cloud & Infrastructure: AWS, Azure, Citrix, VMware, Google Workspace, Office 365, VPN/Firewall

IT Operations: Airtable, Oomnitza, Zendesk, Confluence, Jira, Lumos, Slack API/Slackbots

Operating Systems: Windows, macOS, iOS, Android, ChromeOS, Linux (Ubuntu)

WORK EXPERIENCE

Airtable | New York, NY | 05/2026 — Present

IT Administrator

- Administer Okta identity and access management organization-wide, including account provisioning, deactivation, and periodic access reviews.
- Built Python automation against the Okta API handling account deactivations end-to-end, cutting offboarding from ~30 minutes of manual work to ~5 minutes per departure and reducing stale-account security exposure.
- Designed and built an internal IT ticketing system from scratch on Airtable, now processing ~13,000 tickets per year and replacing a legacy workflow with a faster, more transparent process.
- Built an internal agent that detects support issues lacking documentation and automatically generates corresponding Confluence articles, closing knowledge-base gaps without manual authoring.
- Developed Slack bots in Python integrating the Claude API to automate ticket handling and aging-ticket reminders, improving team responsiveness and SLA adherence.
- Built an asset management system tracking ~2,000 hardware assets and their lifecycle across the organization.

MongoDB | New York, NY | 06/2022 — 04/2026

IT Support Specialist 3

- Wrote a Python script auditing Google Workspace licenses across a 5,000-employee organization, reclaiming 400-500 unused seats and cutting recurring license spend.

- Developed a computer inventory and machine-lock tracking tool from the ground up, deployed globally across all offices.
- Built Slackbots automating ticket and incident reporting, improving response times and internal communication.
- Managed and controlled Mac devices using Jamf, handling deployment, configuration, security updates, and automation.
- Deployed a global Mobile Device Management (MDM) system and established cloud-based Windows laptop enrollment via Azure, streamlining device deployment.

Better Mortgage / Better.com | New York, NY | 02/2020 — 05/2022

Senior Technician, IT Lifecycle Management Systems (10/2021 — 05/2022) · Senior Technician, IT Systems (10/2020 — 10/2021) · Technician, IT Systems (02/2020 — 10/2020)

- Promoted twice in two years while supporting 10,000+ end users across the US and India within defined SOPs and SLAs.
- Led the Tier 1 IT support team through deployments, technical escalations, and project work, serving as the Tier 2/3 escalation point.
- Owned the full hardware and account lifecycle: onboarding, offboarding, and leave-of-absence processing.
- Served as company admin for Okta, BetterCloud, Slack, Zoom, SCCM, Intune, Jamf, and Active Directory.
- Administered Windows servers and VM environments via Citrix and AWS; managed Active Directory domain services and group policy.
- Managed endpoint security (AV/firewall), account provisioning in AD/Okta, and desktop build deployment; wrote PowerShell scripts to resolve system outages.

Rutgers University | New Brunswick, NJ | 09/2015 — 01/2020

Technician, Institute Computer Lab (Work Study)

- Provided Tier 1 help desk support for Windows, Mac, and Linux systems campus-wide.

PROJECTS

Access Review & Audit Log Visualizer | Python, Flask, SQLAlchemy, pandas, Chart.js

github.com/cembsahin/access-audit-visualizer | Live demo: access-audit-visualizer.onrender.com

Full-stack web application that ingests identity/access export CSVs and automatically flags stale and high-risk accounts, with a dashboard visualizing access distribution by department. Includes a pytest test suite and continuous integration via GitHub Actions. Built on 6+ years of hands-on access-review experience in IT administration.

Housing Market Dashboard | Python, Streamlit, pandas, Plotly

github.com/cembsahin/housing-dashboard | Live demo: housing-dashboard-8c7rwnyrptfglbexwg825h.streamlit.app

Interactive data dashboard visualizing US median home value trends across states, using live data from the Zillow Research and FRED APIs.

EDUCATION

Stevens Institute of Technology — M.S., Computer Science, 2025

Rutgers, The State University of New Jersey — B.A., Information Technology & Informatics, 2020
